Real results, sources linked

50 plays that **already worked**.

Every play in this pack is a real case: a creator or builder used AI tools and posted the result. We picked the 50 strongest and turned each one into a full kit: the result and source, a 30-day launch plan, and a prompt chain that takes you from idea to posted.

1. Take the quiz

In the full pack. Five answers about your time, budget, camera and skills point you to the plays that fit.

2. Read the case

The real result with a link to the original source, the tools behind it, and 3 steps to start.

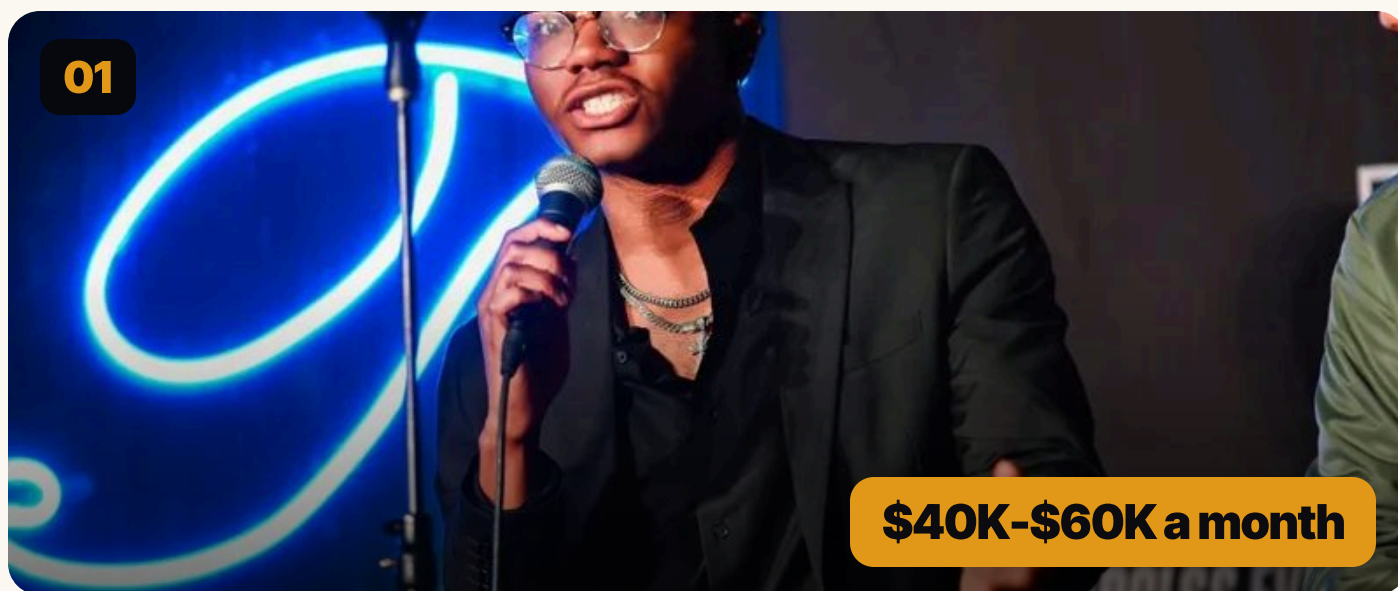

3. Follow the 30-day plan

Week by week actions, a posting cadence and a day by day calendar you can tick off.

4. Run the prompt chain

6 prompts in order: niche and angle, script, visuals, edit and caption, posting and repurposing, then a weekly review.

Read this first. Results are what each person reported or what the linked source published. They are not typical and not a promise. Most people earn less, many earn nothing at first, and several cases note costs, courses or coaching they also sell. The 30-day plans and prompt chains are Starbelo templates written for this pack, not the creators' own plans or prompts. Cadences are starting points, so adjust them to your time. Follow each platform's rules and label AI content where required.

Run a network of calm, long faceless documentary channels on YouTube

Adavia Davis, 22, told Fortune he runs five active faceless YouTube channels (plus a wider portfolio of kids, animal, prank and gossip channels). The most lucrative is a "Boring History" sleep-documentary style narrated like a calm nature doc. Scripts and visuals are generated with Claude, narration with ElevenLabs, and assembly via TubeGen, a pipeline built with partner Eddie Eizner. Videos can run six hours and cost as little as \$60 to produce. He also sells a course (said on the page).

THE REAL RESULT

He told Fortune the network makes roughly \$40,000 to \$60,000 a month in revenue, with about \$6,500 a month in operating costs (85-89% margins). Fortune says it reviewed analytics dashboards and AdSense payout records supporting about \$700,000 a year in gross revenue. He also said the network averages about 2 million views a day.

Reality check: Fortune reviewed records he shared; figures are as reported in the interview. YouTube's inauthentic-content rules can hit mass-produced AI channels, so add real editorial judgment. He sells a course.
